ECAP NANO: NOMINATION AT THE INNOVATION AWARD OF BATIMAT 2019

EDILTECO has been nominated for the Innovation Award of the Mondial du Bâtiment, the Batimat exhibition (Paris, 4-8 November) contest rewarding the best innovative ideas of the building sector. The Jury, composed of the representatives of institutions, certification bodies, construction and company managers, after an attentive analysis, has selected the best innovative ideas of the main sectors of the construction industry, such as structure, building materials and equipment, smart home, indoor and outdoor design, environmental engineering, etc.

Over 140 application have been submitted, but only 60 companies compete for the ultimate prize. The Nominated companies will present their innovation to the Press on September 18th, in Pavillon Wagram, Paris. On Tuesday 5th November the winner will be elected during the exhibition, at Hall 5A, Forum Architecture of BATIMAT. Throughout the duration of the fair (from 4th to 8th November 2019), visitors can discover all the proposals of the participants in the Innovation Areas of three shows (BATIMAT, IDÉOBAIN and INTERCLIMA) and vote their favorite innovation.

EDILTECO decided to participate with ECAP NANO, an insulating system with exceptional thermal properties. Easier and faster to be applied than any other traditional system, ECAP NANO is a board in aerogel for internal and external wall insulation. It is available from 10 to 60 mm of thickness, and a R value from 0,67 to 4,00. The low thickness is a great advantage, because the board, taking less space on the walls, wastes less living area inside and less space outside on the street. The combination of nanotechnology and thermal insulation.

Finger crossed and good luck to Edilteco!
