EDILTECO AT WOC LAS VEGAS: INNOVATION AND PROGRESS

After the success at the Construct fair in Canada, EDILTECO Group continues its journey in the New Continent and lands in Las Vegas to participate to 'World of Concrete', the largest fair in the United States dedicated to the concrete and masonry construction industry.

We want to introduce an innovative approach to construction in the United States and throughout North America, based on know-how that we have perfected over the last four decades: the Politerm Technology; a patented construction system characterized by lightness, insulation, and safety. Our goal is to share with everyone this innovation that has a long history of experience and reliability in the construction industry.

At WOC, you will find:

Politerm Blu

The only super-light aggregate for the packaging of lightweight thermal-insulating cementitious mixes composed of virgin expanded polystyrene beads, with guaranteed and certified characteristics. Beware of imitations!

Isolcap Range

The premixed products of the Isolcap line, in bags and ready to use, are the result of technology that makes our products unique for quality, strength, performance, and workability. As a confirmation of this and of constant production quality over time, Politerm Blu and the Isolcap premixed line are the only RAL certified aggregates on the Italian market and completely MADE IN ITALY.

Construction Equipment

Edilteco develops, manufactures, and tests laying machinery to ensure the effectiveness of the application of its materials on construction sites.

Protherm Light

An excellent product for fire protection. It is a lightweight thermal-insulating premixed plaster based on virgin EPS beads, hydraulic binders, and special additives for mechanized application; suitable for both internal and external application.
